If you have Long COVID, you may be able to join a research study.

What is Long COVID?
Long COVID is when a person is sick months after getting COVID. Cognitive dysfunction symptoms of Long COVID can include brain fog, trouble thinking clearly, memory changes, fatigue, headache, slowed attention, anxiety, depression, and difficulty with problem-solving.

What is the study about?
RECOVER-NEURO is studying possible treatments for adults who have cognitive dysfunction symptoms related to Long COVID. We want to learn if brain training may improve those symptoms.

Am I a good fit for the study?
- You are an adult who had COVID
- You do not have an active COVID infection
- You have 1 or more of these symptoms:
  - Brain fog or trouble thinking clearly
  - Trouble paying attention or remembering things

No health insurance is required
Learn more at trials.recovercovid.org/neuro
What can I expect if I decide to take part?

Your participation should last about 6 months.

You would be paid for your time.

Your personal health information collected during the study will be kept confidential.

What will I be asked to do as a participant?

Visit the clinic 3 times

Complete brain training sessions at home for 10 weeks

Answer follow-up questions about your health and well-being

Complete testing, including lab tests and brain function tests

Contact the study team to find out if RECOVER-NEURO is right for you:
